

Bamboo Veneer Waiver

Because of moisture and stability issues, Davis Mill and Cabinet, LLC (DMC) does not use solid bamboo products. DMC uses only bamboo veneer products. And as such, there are some limitations as stated below.

Some or all of the following may apply to your project:

1. Bamboo is strictly a veneer product. No solid bamboo is available to match the veneer. All parts will be made from veneer materials. Any design using bamboo veneers must use Slab doors and flat molding. Square (#5 edge) is the only edge profile available.
2. Edge banding is available in 1mm (actually .7mm) thick. Edge banding is vertical only - no horizontal grain edge banding is available.
3. No “poly” material is available in bamboo veneers. If the project is designed with finished ends, only 2 sided veneer will be used. The inside of a cabinet that may otherwise have a melamine interior, will be bamboo veneer also.
4. Panels are limited to 1220mm wide x 2438mm long (4’ x 8’). Anything wider or longer will require splices to achieve the desired the width or length. These slices may be visible and are not _____ of a panel.
5. Although this is an “engineered” veneer, it still has many of the characteristics of real wood such as the possibility to warp, shrink or swell. Sunlight and age can change the color. Extremes in temperature or humidity can adversely affect the veneers.
6. Door samples are **always required** for bamboo veneer projects. The door sample may or may not exhibit all possible variations that will be visible within a full project.

I have read the above explanation and find it acceptable. I agree not to hold Davis Mill and Cabinet, LLC or the Designer/Dealer responsible for any claims or problems resulting from these issues should they arise.
