

Vertical Grain Veneer Waiver

Below are some things to be aware of:

1. Veneer is limited in size. Typically, sheet sizes are 1220mm (48") x 2438mm (96"). Some species of veneer are available in lengths of 3048mm (120"), but these are the exceptions to the rule.
2. Vertical grain cabinets are grain matched, but is limited to an individual cabinet - meaning adjacent cabinets are not grain matched to each other. Finished ends are not grain matched. Grain matching is limited to available veneer sizes (as noted above). Entire runs of cabinets cannot be grain matched to each other.
3. When a veneer project is cut out, no attempt is made to cut cabinets in close proximity to one another or out of the same sheet. The result is that doors of a adjacent cabinets may not come out of the same sheet of veneer. Veneer can vary from sheet to sheet so this can cause variation from one cabinet to the next. Variation is normal and expected in a veneer product and is not a cause for warranty replacement.
4. For very uniform slab doors, Engineered Veneers, Melamine, or Laminate are the best option. These are the only products that are predictably uniform from sheet to sheet. Any naturally occurring veneer or lumber WILL have considerable variation from piece to piece.
5. Some veneers do not have solid wood counterparts. Engineered Veneers and Bamboo Veneers are good examples of this. In cases where no solid wood is available, profiled moldings and some other parts are not available. Designers must use flat moldings on these types of jobs.

I have read the above explanation and find it acceptable. I agree not to hold Davis Mill and Cabinet LLC, or the designer/dealer responsible for any claims or problems resulting from these characteristics.
